

Tap on "Settings"

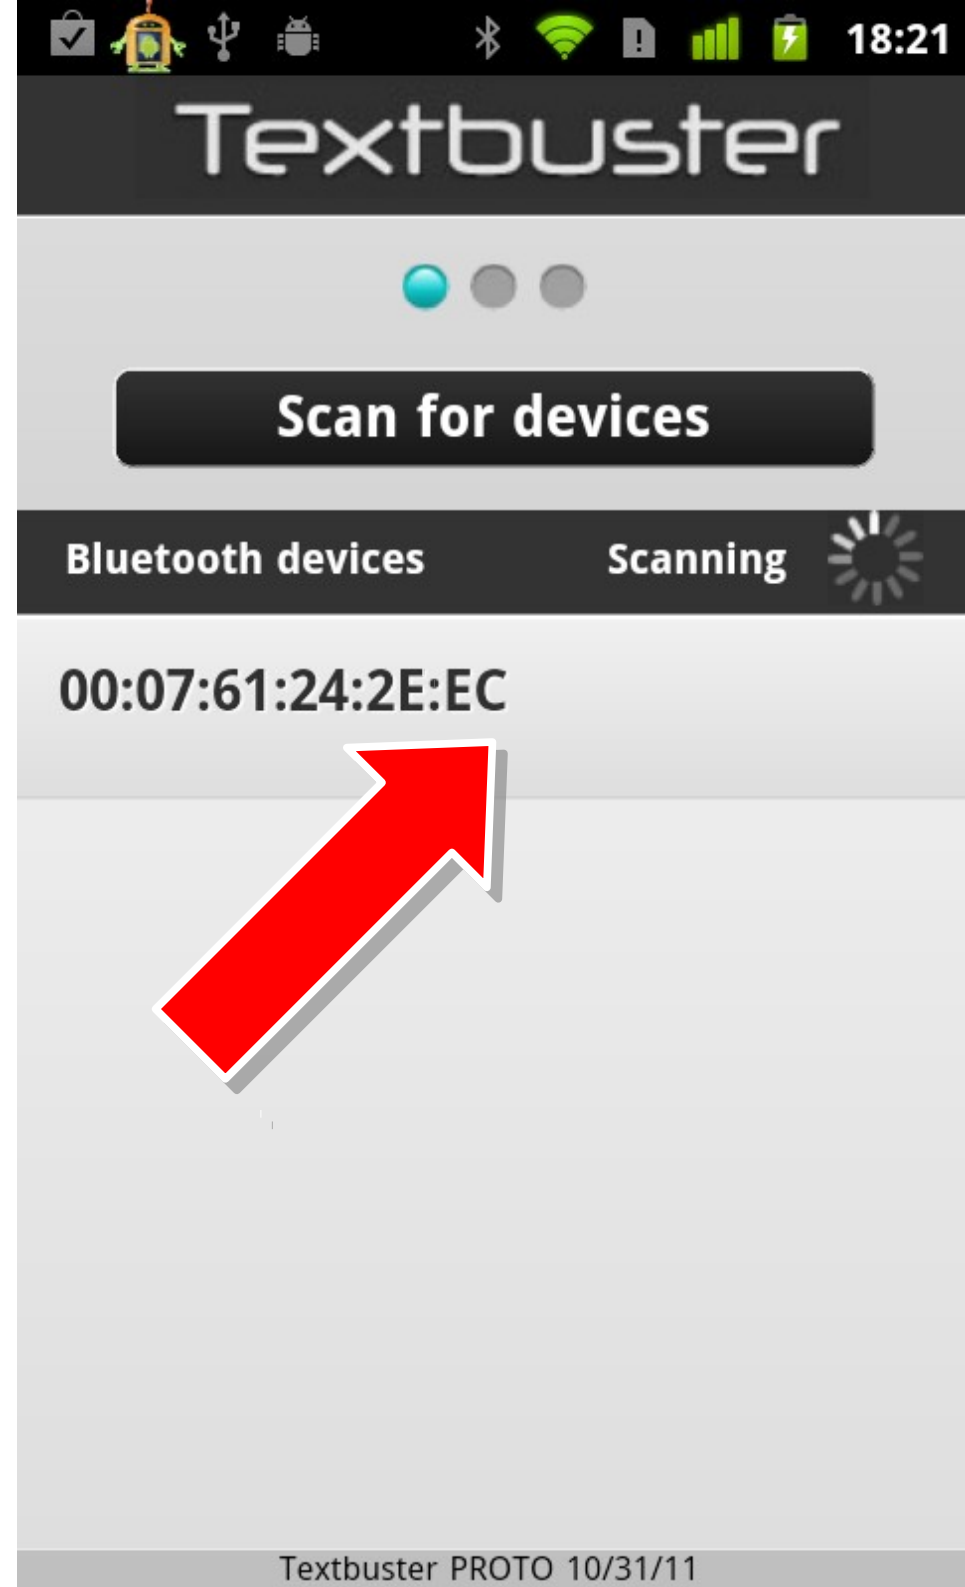

1. Tap on “Scan for devices”
2. Turn on a Bluetooth device
3. Wait up to 30 seconds

(the scan will continue until  
at least one Bluetooth  
device was found)

Tap the desired Bluetooth device

(create a list of devices you want to use for presentation; in a crowded room a lot of addresses [ $>100$ ], might be discovered, so make sure you know which address belongs to your device when doing a Bluetooth setup on site)

1. Tap on “OK” ← this indicates success

2. Tap on “I accept” → you are taken back to the main screen

After setup the app will search for the configured device. The settings are saved on the internal SD memory card so they are permanent and persist even after a reboot of the phone.
